

## 1. HOLOMORPHIC CONTINUATION

**Theorem 1** (Identity principle for holomorphic functions). *Let  $U \subset \mathbb{C}$  be a connected open set. Let  $f, g : U \rightarrow \mathbb{C}$  be holomorphic functions. If  $f = g$  on a set with a limit point in  $U$ , then  $f = g$  on all of  $U$ .*

**Corollary 2.** *Let  $U \subset \Omega \subseteq \mathbb{C}$  be open subsets, with  $U$  nonempty and  $\Omega$  connected. Let  $f : U \rightarrow \mathbb{C}$  be a holomorphic function. Then there is at most one extension of  $f$  to a holomorphic function  $\Omega \rightarrow \mathbb{C}$ .*

## 2. CAUCHY'S INTEGRAL FORMULA

**Theorem 3.** *Let  $f : U \rightarrow \mathbb{C}$  be a holomorphic function defined on an open subset  $U$ . Let  $\gamma$  be a closed rectifiable curve in  $U$ . Then  $\int_{\gamma} f(z) dz = 0$ .*

**Theorem 4.** *Let  $0 \leq a < b \leq \infty$ . Let  $f(z)$  be a holomorphic function on the annulus  $\{z \in \mathbb{C} : a < |z| < b\}$  given by a convergent Laurent series*

$$f(z) = \sum_{n \in \mathbb{Z}} c_n z^n.$$

(1) *For any  $r \in (a, b)$  and  $n \in \mathbb{Z}$ , we have*

$$\begin{aligned} c_n &= \oint_{|z|=r} \frac{f(z)}{z^n} \frac{dz}{2\pi i z} \\ &= \frac{1}{2\pi r^n} \int_{\theta=0}^{2\pi} f(re^{i\theta}) e^{-in\theta} d\theta. \end{aligned}$$

(2) *For each compact subset  $E$  of  $(a, b)$ , there exists  $M \geq 0$  so that for all  $r \in E$ , we have*

$$\sum_{n \in \mathbb{Z}} |c_n| r^n \leq M. \quad (1)$$

**Theorem 5.** *Let  $U$  be an open subset of  $\mathbb{C}$ , let  $f : U \rightarrow \mathbb{C}$  be meromorphic. Let  $\gamma$  be a smooth closed curve in  $U$ , oriented counterclockwise, that does not pass through any pole of  $f$ . Then*

$$\int_{\gamma} f(z) dz = 2\pi i \sum_{\substack{z \in \text{interior}(\gamma) \\ \text{pole of } f}} \text{res}_z(f).$$

**Remark 6.** Let  $0 < r < R$ . Let  $f$  be a meromorphic function on a neighborhood of the annulus  $\{z : r < |z| < R\}$  that has no poles on either of the circles  $|z| = r, R$ . Then

$$\oint_{|z|=R} f(z) dz = \oint_{|z|=r} f(z) dz + 2\pi i \sum_{\substack{r < |z| < R \\ \text{pole of } f}} \text{res}_z(f).$$

## 3. HOLOMORPHY OF LIMITS AND SERIES

**Theorem 7.** *Let  $U$  be an open subset of the complex plane. Let  $f_n$  be a sequence of holomorphic functions on  $U$ .*

- (1) *Suppose that the sequence  $f_n$  converges pointwise to some function  $f$ , uniformly on compact subsets of  $U$ . Then  $f$  is holomorphic.*
- (2) *Suppose that the partial sums  $\sum_{n \leq N} f_n$  converge pointwise to some function  $f$ , uniformly on compact subsets of  $U$ . Then the sum  $\sum_n f_n$  is holomorphic.*
